

Hemingway Professional ASP™ service
Versus
Hemingway Enterprise™ software license

Buy Altit's Hemingway Professional ASP if:

- 1) You do not want to, or do not have the ability to host a website at your company.
- 2) You do want the responsibility of purchasing or managing the required computer hardware, system software (IIS, SQLServer, Windows OS, etc.) and network infrastructure on which Hemingway will run.
- 3) You do not have need for an e-mail domain.
- 4) The only integration to other applications that you will do will be done through URL links.
- 5) You feel comfortable having your web content residing directly on the Internet (as opposed to being behind a firewall).
- 6) You want someone else to act as your Hemingway Administrator and have the ability to logon as any of your users.
- 7) You are a small company and can't afford Hemingway Enterprise.

Buy Hemingway Enterprise if:

- 1) You have sensitive information stored on your web (employee records, customer lists, etc.) that you want behind your corporate firewall.
- 2) You want to customize Hemingway with programmatic integration to your other business applications.
- 3) You want to customize Hemingway by adding web applications unique for your website (such as auto-registration, wizard generators, unique auto-mailers, etc.).
- 4) You have an IT group and your own internal network and already host your company e-mail and webserver.
- 5) You want more control over backups, prioritizing problem resolution, applying software updates, etc.
- 6) You have multiple Domains (more than 2).
- 7) You are building websites using Hemingway but serving the websites on a Linux, Unix, or other webserver.
- 8) You have specific performance requirements that are not met through Altit's ASP service (could be either network or hardware server performance issues).
- 9) You want to host Hemingway at multiple locations (different corporate divisions, International locations, etc.)
- 10) You want to use Hemingway to run your own ASP service.
- 11) You want to change certain pre-set limits on Hemingway (how big of file that can be uploaded, how much disk space you are allocated, whether .exe files can be uploaded, etc.)
